

HID SAFE™ Enterprise

**Enterprise Class
Physical Identity and
Access Management Solution**

Reduce the costs and risks in managing physical access of your employees, contractors, tenants and visitors.

HID SAFE™ Enterprise is a modern, scalable off-the-shelf software solution that enables organizations to manage identities — employees, contractors, tenants, and visitors — and their access across physical access systems. HID SAFE Enterprise solves the key identity management challenges organizations face — onboarding and badging, visitor management, access management and compliance.

Through a single, centralized platform, HID SAFE Enterprise not only advances the security functions of identity management, it also transforms the communities of stakeholders involved by breaking down silos in organizations and enabling collaboration across departments and teams. With HID SAFE Enterprise, process managers in HR, IT, Facilities, Reception and Contractor Administration are enabled to effectively manage all their identity types including employees, contractors and visitors.

KEY BENEFITS

- Reduce operating costs through automation of employee-based PIAM processes
- Gain complete control by centrally managing employees and their physical access across disparate PACS
- Minimize risks associated with manual enforcement of policies related to access provisioning and de-provisioning
- Minimize delays in on-/off-boarding identities and their physical access in PACS

HID SAFE™ Enterprise features a comprehensive range of functions including:

- Utilizes pre-defined rules and workflows for on-/off-boarding of identities, access provisioning/de-provisioning and access change management
- Allows users to manage various details of a physical identity including access card information, biographic and biometric details, results of security checks and logs of historical access usage
- Allows users to create spatial hierarchy of locations (sites), the underlying buildings, floors and associated areas for better access management
- Provides a central location to search and assign access levels for an identity across disparate physical access control systems (PACS) and specify details such as time schedule of access (24x7, business hours)
- Enables employees to make multiple physical security requests, such as new physical access requests and badge requests, using a self-service portal
- Aggregates access level information from disparate PACS and allows users to manage additional details typically not available in PACS, such as risk level, area owner, multiple approvers and prerequisites for access (such as training for critical areas)
- Allows creation of access profiles, which automates assigning physical access using common identity attributes such as role, location and department
- Allows authorized personnel to immediately terminate physical access of identities, using urgent termination, avoiding termination delays by HR personnel
- Maintains a complete audit trail of all transactions executed within the system and between HID SAFE Enterprise and external systems
- Delivers pre-defined reports based on access records and logs of identities for compliance reporting and security planning

Employee requests access via HID SAFE Self Service Portal

Approved request sent by HID SAFE to PACS System

New Access Request Workflow in HID SAFE Enterprise's Advanced Access Manager module

Key Modules

Advanced Access Manager

Streamlines the central management of the physical access lifecycle for an organization's employees, contractors and tenant identities. Delegated access allows key stakeholders to use administrative functions such as onboarding, document gathering and processing approvals. The self-service portal enables individuals to request access and maintain their profiles.

Badge Manager

Provides a platform to capture data from external identity sources, pre-load identity information, and get badging prerequisites prior to printing a badge. Customers have the ability to design, create and print employee badges. The platform also allows individuals to request temporary and new badges.

Visitor Manager

Securely and quickly manages the entire visitor lifecycle — from easy pre-registration to welcoming visitor invitations through rapid check-in and check-out. Designed with the enterprise in mind, HID SAFE™ Visitor Manager scales from small offices with unattended stand-alone kiosks to corporate headquarters with busy lobby teams.

Security Reporter and Operations Analytics

Assembles a comprehensive set of reports that assist in analyzing and managing all of the activities involved with on-boarding and badging, access management and visitor management. Reports include status, activity monitoring, diagnostics and compliance.

HID SAFE™ Enterprise and Compliance

- Compliance functionality within HID SAFE Enterprise centers around three activities: system logs, reports, and audits.
- All HID SAFE Enterprise modules record every access request and approval within the system, creating a complete record of access
- Who, what, where and why reports provide visibility into who is granted access, where, why, for how long and who authorized access for any area — from a data center down to a single door

Physical Identity management family of products

Along with HID SAFE Enterprise, the family includes:

- HID SAFE Visitor Manager
- HID SAFE Custom
