

Security and Convenience
for Your Entire Workforce

A HID Global Guide: Workforce Identity Solutions

Enable your workforce to succeed while protecting your buildings, data, networks and people. No matter where they are, we help your workforce stay safe, secure and productive.

PHYSICAL IDENTITY AND ACCESS MANAGEMENT

Our intuitive physical identity and access management (PIAM) solution enables robust physical security across employees, contractors and visitors by streamlining policy administration and enforcement, integrating with physical access control systems, and identifying potential security issues with advanced analytics. Scalable offerings are available according to the level of configuration or customization needed to address a range of workplaces, from globally-distributed, to small one-building businesses, to a variety of vertical industries. Product portfolio comprises: HID SAFE™ and WorkforceID™ Credential Manager

VISITOR MANAGEMENT

Our visitor management solutions help you streamline processes, from check-in to check-out and beyond, for partners, contractors and customers while improving physical security at the same time. Across a range of use cases, visitor management is an extension of your brand and an opportunity to ensure compliance with vertical regulations without creating undue burden for employees and visitors alike. Product portfolio comprises: HID SAFE™ Visitor Manager, HID SAFE™ Intelligent Patient Visitor Manager, WorkforceID™ Visitor Manager, and EasyLobby®

MULTI-FACTOR AUTHENTICATION

With HID, you can mix and match all three authentication factors (something you know, have and are) to protect access to valuable corporate resources with flexible and simple multi-factor authentication. With the industry's widest array of authentication methods and form factors, ranging from smart credentials and access badges to mobile and biometrics, as well as security standards (FIDO2, PKI/PIV, OATH, Seos®), organizations big and small can tailor a multi-factor authentication that addresses their specific use cases, security requirements, business needs and compliance mandates. From stand-alone to managed credentials, it's a versatile solution that provides secure access to PCs, networks, business applications and data, in addition to converged physical and logical access, while accommodating your users' workflow. Product portfolio comprises: HID Crescendo® smart cards and security keys, WorkforceID™ Digital Credential Manager, DigitalPersona®, and WorkforceID™ Authentication

Physical Identity and Access Management

Solutions to Manage Employees, Contractors, Visitors and More

Ensure the appropriate access is granted to corporate facilities and workspaces by managing employee and extended identities and credentials, adhering to physical security regulations, and ensuring access policy governance.

HID SAFE HELPS ORGANIZATIONS TO:

- Provision, validate and manage identities from multiple sources
- Assign and manage access based on role, location and more
- Issue and manage badges and credentials
- Administer access policies and enforcement workflows
- Perform audits, access reviews and attestations
- Monitor physical access
- Use advanced analytics to remediate user and facility risk

Extend HID SAFE to help with industry-specific compliance needs.

Aviation

Airports have rigorous regulatory mandates and a complex workforce with a diverse cross section of roles and requirements — from in-house employees to airline staff and facility contractors. HID SAFE for Aviation helps enforce and demonstrate adherence to regulatory compliance, automate the workflows required for compliance, and improve the customer experience with efficient data capture and self-service capabilities.

Healthcare

Hospitals have unique physical access requirements that go beyond physical security by balancing infectious disease protocols and patient care needs. HID SAFE for Healthcare helps manage physical identities for hospital employees, contractors, vendors, visitors, patients and their access to facilities and patients. It unifies watchlists, internal identity management systems, and health information management systems with centralized workflows and policies to ensure the health and safety of the entire healthcare facility.

Financial Services

In an industry rife with regulations, risk and insider threats, HID Global provides next-level security to banking and financial institutions. Adding multiple, disparate systems to financial organizations only creates a more siloed approach to security. Instead, HID SAFE acts as a platform to improve efficiency and protection across various financial systems and highly secure physical areas.

Government

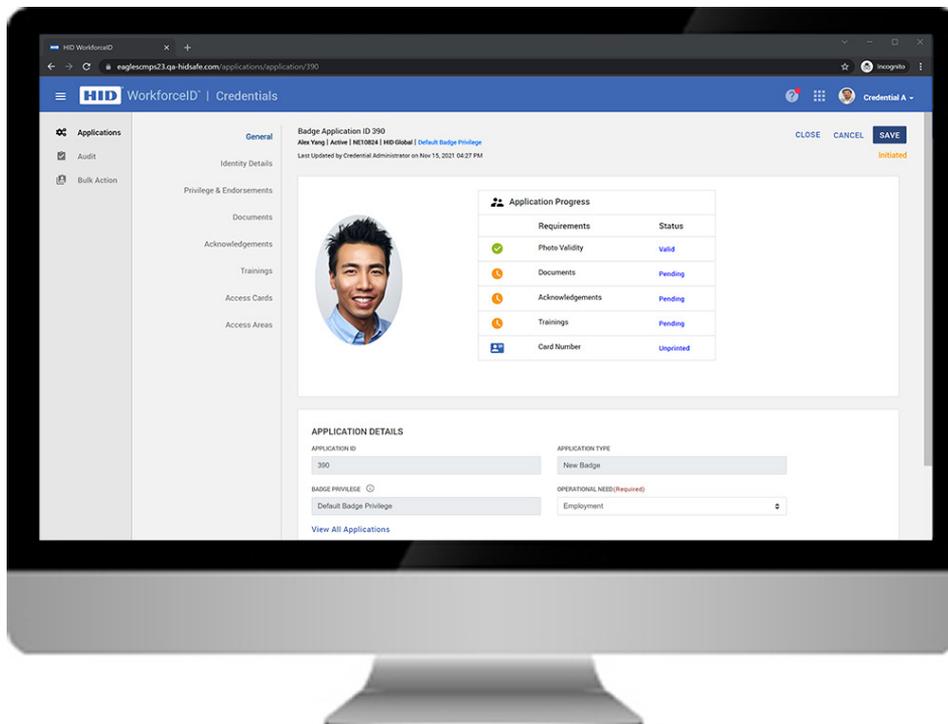

Government agencies deal with multiple locations and physical access control systems alongside numerous processes and security mandates. HID SAFE for Government provides a policy-based approach to managing and enrolling PIV cardholders into diverse PACS. This approach enables the flexible enrollment, validation and processing of individuals gaining temporary or long-term access to a given facility without changing the existing physical security infrastructure.

Physical Credentialing as a service

Perfect for organizations with less complex needs that want to create simplified and straightforward processes to issue, manage, and automate workforce and contractor badging, WorkforceID Credential Manager is an award-winning, cloud-based solution that helps facilitate return to work securely and efficiently.

WorkforceID Credential Manager helps organizations to:

- Automate the badge issuance process for everyone
- Eliminate manual processes
- Gain continuous insight into issued credentials — who has them, what they are for, why they have been issued and for how long
- Improve security and reduce insider threats by automating credential revocation

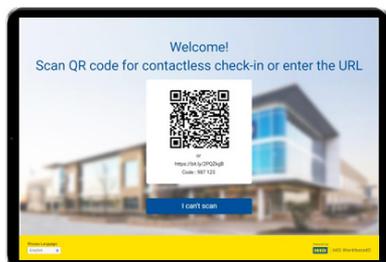

Visitor Management

Visitor Experience and Digital Lobby Solutions

HID makes it easy to create a digital front lobby that supports a streamlined set of visitor processes. The visitor experience is often the first interaction with a company, so make it a positive one with the full capabilities of a flexible visitor management solution:

- Touchless self check-in at a kiosk, with a QR code or ID card
- SMS and email notifications and alerts
- Customizable workflows, such as screening questions
- Easy scheduling and pre-registration, with calendaring application integration such as Outlook
- Real-time reporting to capture visitor and host data
- Directory management
- Watchlists for screening of visitors
- Integration with PACS and other corporate infrastructure

For Healthcare: Intelligent Patient Visitor Management

Healthcare facilities have unique visitor management challenges given safety concerns, controls for infectious diseases, and needs for understanding where visitors are and whom they can visit. HID SAFE Intelligent Patient Visitor Manager allows inpatients and outpatients to configure visitation policies.

These visitors can be easily managed across a single or multiple locations, enabling:

- Automation of visitor processes
- Increased efficiency of front desk operations
- Improved hospital security and identification of risks
- Strong compliance to DEA, FDA and HL7

Multi-Factor Authentication

Credentials and Authenticators

HID Crescendo enables organizations to secure access to valuable corporate resources with user-friendly, quick-to-deploy and easy-to-manage multi-factor authentication. Thousands of employees across the world use HID's high assurance credentials for passwordless authentication and SSO-protection, secure log-in to VPN, servers, Azure Active Directory and any application protected by it, Windows and shared workstations, digital signature and data encryption. Organizations have the flexibility to choose from smart cards, building access cards or security keys (USB-A and USB-C) with support for FIDO2, PIV/ PKI, OATH as well as various physical access technologies to form a Zero Trust security infrastructure across their organization.

Balance security and user convenience with a versatile solution enabling:

- **Converged physical and logical access:** Extend your user authentication solution and secure access to facilities and IT resources with the convenience of a single credential
- **Ease of use:** Make passwordless authentication and secure log-in as easy as tapping a card
- **Choice and flexibility:** Use the credential best suited to your organization, including FIDO, PKI and OATH, in the format that meets the needs and preferences of your hybrid workforce - smart card, security key or mobile

Designed to be easy and fast to deploy, HID Crescendo smart cards and security keys can be used in stand-alone mode or centrally managed by HID's credential management solutions, for organizations deploying security at scale.

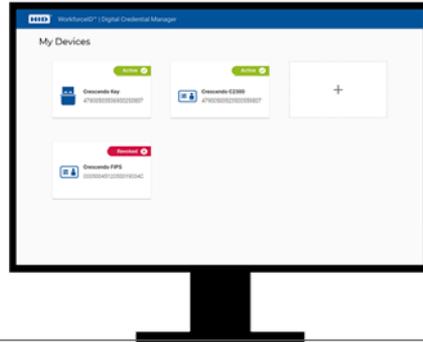

Digital Credential Management as a service

WorkforceID Digital Credential Manager makes it easy for organizations to deploy, manage and revoke credentials that secure access to PCs, networks, business applications and data by providing a suite of services for centralized PKI credential lifecycle and device PIN management. Choose from a wide range of secure authenticators to deploy, including PKI- and FIDO2-enabled HID Crescendo smart cards and security keys, and begin issuing and managing credentials in just a few hours with a scalable Identity as a Service (IDaaS) solution empowering:

- Convenient 2-Factor authentication
- Lower password management costs

- PKI certificate-based credentials
- Choice of publicly trusted or private dedicated Certificate Authority (CA)

For an on-premise alternative, HID provides ActivID® Credential Management system.

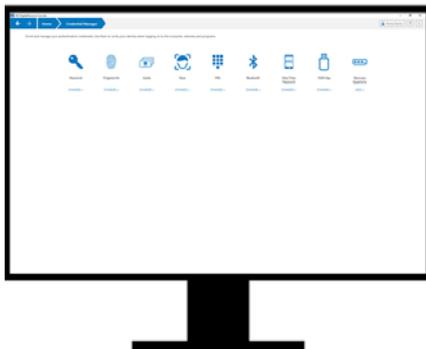

Desktop User Authentication

Ensure rapid and secure Windows® logon and VPN access as well as swift log-in to shared workstations, web, mobile and cloud applications with award-winning DigitalPersona. Organizations can easily layer authentication and customize policies based on contextual risk factors of time and location. The latter cover where you are and when you act, allowing you to precisely match your risk exposure to the optimal security posture for your organization.

DIGITALPERSONA HELPS ORGANIZATIONS TO:

- Deploy roaming user profiles for quick and easy access across workstations used in shared workspaces, such as hospitals, manufacturing, retail, call centers and others
- Choose from the market's broadest array of authentication methods and form factors to address the unique security needs of the modern workplace:
 - Smart cards and building access cards
 - FIDO- and PKI-enabled security keys (USB-A and USB-C)
 - Mobile devices including OTP, push notification and Bluetooth
 - Biometrics including fingerprint and face

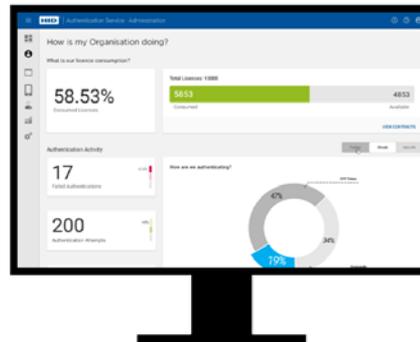

User Authentication as a service

WorkforceID Authentication enables organizations to extend a streamlined, simple and secure login experience to corporate networks at any time, allowing diverse and dynamic workforces to securely access what they need to do their jobs, wherever they are. The cloud-based application easily integrates with existing infrastructure, including Microsoft's on-premise Active Directory (AD) or cloud-based Azure AD.

Organizations have the flexibility to use multiple authentication methods, including mobile authenticators such as HID Approve or FIDO-enabled smart cards and security keys, or a combination of those, to accommodate the diverse preferences of the hybrid workforce.

WorkforceID Authentication, WorkforceID Credential Manager, WorkforceID Digital Credential Manager and WorkforceID Visitor Manager are all part of HID's WorkforceID™ suite of cloud-based applications which are built to deliver a unified and flexible approach to identity and access management.

By managing security through identity, our workforce identity management solutions give users the flexibility they need to stay safe, secure and productive, and enable administrators to quickly detect and address risks to remain compliant with evolving security standards, technologies and industry regulations.
